RESEARCH INTERESTS

- Optimization: Develop provably optimal methods for (non-)convex and stochastic optimization.

- Statistics: Propose practical methods for structural estimation and online statistical inference, and deepen theoretical understanding of the interaction between optimization and sampling.

- Sequential Decision Making: Develop computationally efficient online algorithms that balance the exploration-exploitation trade-off in problems such as bandit or reinforcement learning.

- Trustworthy Machine Learning: Understand the trade-offs between communication efficiency, accuracy, privacy, robustness, and fairness, and design efficient algorithms with provable guarantees for large-scale problems.
